

Unqork for Healthcare

Create thoughtful patient experiences, digitize workflows, reduce costs.

Improve Quality

Unqork empowers healthcare and life science organizations to maintain a flexible digital infrastructure with **99.99% uptime** and **600x fewer defects** than code/low-code.

Move Faster

Utilize every ounce of your IT budget to create, improve, and deploy digital experiences across your organization. **Go from ideation to production in as little as 12 weeks.**

Reduce Costs

Streamline initial builds & ongoing maintenance with **3x cost savings** versus the Total Cost of Ownership with a traditional code/low-code-based approach.

When it comes to digital transformation, the healthcare industry faces several long-standing development challenges, including complex data structures, high regulatory burden, and deep interdependence across stakeholders.

As a result, many organizations remain overly reliant on outdated manual processes and disparate legacy systems, which leads to operational inefficiencies, high costs, opaque processes, and poor stakeholder experiences.

It is an expensive and complex undertaking to build a custom healthcare solution that addresses patients' rising expectations for digital engagements, is sufficiently tailored to an organization's needs (e.g., disease area, service line, or claims processing approach), and is flexible enough to comply with an evolving patchwork of regulations. At least, that was the case using a traditional code/low-code-based approach.

With Unqork's industry-first enterprise-grade no-code application platform, healthcare & life science organizations can rapidly build and effectively manage custom software to automate core processes, optimize complex workflows, and enhance the user experience.

EXAMPLE HEALTHCARE SOLUTIONS

Unqork provides everything you need to build enterprise-quality applications without the need to write a single line of code.

Payers

- Client Onboarding & Lifecycle Management
- Member Onboarding & Portals
- Provider Lifecycle Management
- Case Management & Care Navigation
- Price Transparency

Providers

- Clinical Decision Support
- Digital Front Door (Portals)
- eForms
- Patient Registration
- Hospital @ Home
- Caregiver Tools & Case Management
- Price Transparency

Life Sciences

- Digital Protocols
- Site Selection & Activation
- Patient Recruitment & Screening
- Trial Companion Applications
- Patient Disease Registries
- Digital Service Centers for Patients & Providers

SUCCESS STORY

A large urban hospital tapped the power of Unqork to transform the patient journey.

A large urban hospital wanted a solution to decrease patient wait times and improve patient satisfaction. They hoped to achieve this by transforming the processes of finding a physician, booking an appointment, and registering for a visit. They also wanted to reduce claims denials from improperly completed paperwork and improve patients' ability to access their medical record data.

The organization partnered with Unqork to develop a digital front door for patients to support physician lookup, appointment booking, calendar integration, visit registration, and medical record access, digitizing the entire experience for patients in a mobile-responsive solution.

Accelerated Speed-to-Market

With development cycles measured in weeks rather than months or years

Fully Digital Patient Registration

Seamlessly integrated with existing EMR systems

Reduced Costs

Of both operations and Total Cost of Ownership (TCO)

Decreased Claim Denials

Via automatic identification of incomplete or incorrect data

Unqork and the No-Code Revolution

No-code is a new class of cloud-based development platform that empowers organizations to rapidly build robust enterprise-grade software without writing a single line of code. Advanced no-code platforms such as Unqork come “out-of-the-box” (or out-of-the-virtual-SaaS-box) with all the toolsets and elements necessary to build and manage a robust application (e.g., front-end UX, workflow, rules engine, analytics, integrations, and maintenance). Since they’re all components of the same unified platform, everything works together in instant harmony. With no-code, organizations can devote all their development resources to addressing business challenges instead of technical ones.

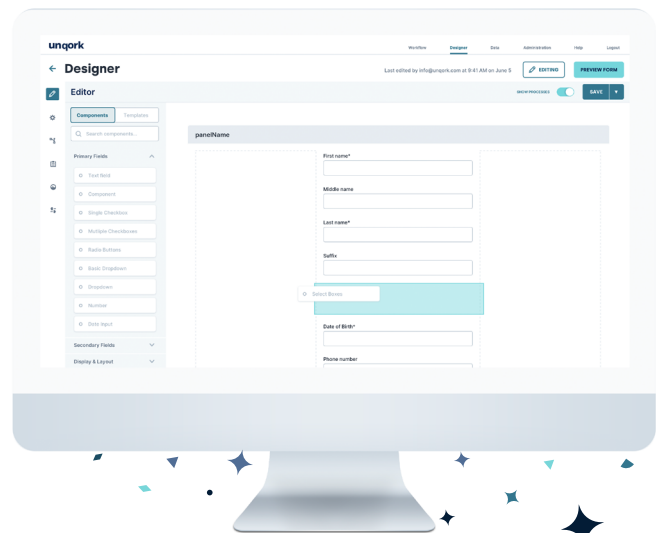

Also, by eliminating the need to write code from the building process, no-code expands the scope of who is doing the development. In a no-code platform, users (or **‘Creators’** as we refer to them at Unqork) build applications by drag-and-dropping configurable elements representing both user-facing features and back-end application logic. While modern programming languages (Java, Python, etc.) can take a year to learn and a decade to master, no-code can be picked up in **just a few weeks**, making development more collaborative and recruiting more flexible.

Unqork: the World's First Enterprise No-Code Application Platform

Unqork is specifically designed to address the challenges of the world’s most complex and regulated service environments, including **financial services, insurance, healthcare, and government**. We levy decades of industry-specific experience from our in-house experts to take on each sector’s most critical challenges.

Unqork has backing from some of the world’s most disciplined investors, including Goldman Sachs, Capital G, and BlackRock. Our technologies have been adopted by leading organizations, including Liberty Mutual, Marsh, Pacific Life, Goldman Sachs, and the city of New York, just to name a notable few.

Our clients can achieve unparalleled speed and flexibility in their development function while requiring a fraction of the resources. We can deliver these benefits through:

A Unified SaaS Platform

Unqork boasts dozens of components and capabilities related to **compliance** (up-to-date rules engines for FATCA, UK CDOT, Dodd-Frank, and more), **security** (native encryption, RBAC, and crowd-sourced penetration tests), and **application management** (SDLC governance, historic versioning, and module management).

A Visual UI

Applications are built via an intuitive, visual User Interface (UI) featuring drag-and-drop components representing user-facing elements, backend processes, data transformations, third-party integrations, and a growing library of industry-specific templates.

Enterprise-Grade Standards

Unqork comes with enterprise-ready compliance (e.g., SOC2, GDPR, Privacy Shield compliant, etc.). We have complete security capabilities, including proprietary RBAC solutions, and we provide BCP and DR support for applications built on our platform.
