

Unqork for Healthcare Life Sciences

Rapidly build applications that make clinical trial processes more efficient, secure, and safe.

Complex regulations, compliance, reimbursement, and clinical context all pose significant and constantly evolving challenges to global life sciences organizations. In addition, the COVID-19 pandemic has forced many biopharma companies and CROs to re-think critical processes for clinical trials, manufacturing, and product launches.

Unqork is an enterprise no-code platform that has changed how software is built and managed at many of the world's most complex organizations. Automating sophisticated business processes and integrating them with legacy systems is now a completely visual configuration exercise. For Life Sciences, Unqork can be a catalyst for transformation by enabling the rapid build, deployment, and scaling of applications across the enterprise to manage mission-critical functions.

Key Elements

- ✓ **Improve Quality:** Unqork empowers healthcare organizations to maintain a flexible digital infrastructure with **99.99% uptime** and **600x fewer defects** than code/low-code.
- ✓ **Move Faster:** Utilize every ounce of your IT budget to create, improve, and deploy digital experiences across your organization. **Go from ideation to production in as little as 12 weeks.**
- ✓ **Reduce Costs:** Reduce costs of initial builds & ongoing maintenance with **3x cost savings** versus the Total Cost of Ownership with a traditional code/low-code-based approach.

Example Life Sciences Solutions

Digital Protocols

Build country-specific protocols and alert stakeholders to changes with a repository of discrete i/e criteria.

Site Selection & Activation

Automate site feasibility assessments and monitor real-time performance against recruitment goals.

Patient Recruitment & Screening

Fully digitize intake processes for patients and enable site staff to easily source patient medical history and screen virtually.

Trial Companion Applications

Guide patient, investigator, and coordinator workflows through conventional, decentralized, and hybrid trials.

Patient Disease Registries

Enable target patients to share medical records, connected device data, and social-behavioral insights with research teams.

Digital Service Center for Patients

Create unified and personalized patient portals that integrate best-of-breed hub solutions for high-touch therapies.

Digital Service Center for Providers

Create unified and personalized service centers that simplify workflows and reduce the administrative burden for providers using high-touch therapies.

Unqork and the No-Code Revolution

No-code is a new class of cloud-based development platform that empowers organizations to rapidly build robust enterprise-grade software without writing a single line of code. Advanced no-code platforms such as Unqork come “out-of-the-box” (or out-of-the-virtual-SaaS-box) with all the toolsets and elements necessary to build and manage a robust application (e.g., front-end UX, workflow, rules engine, analytics, integrations, and maintenance). Since they’re all components of the same unified platform, everything works together in instant harmony. With no-code, organizations can devote all their development resources to addressing business challenges instead of technical ones.

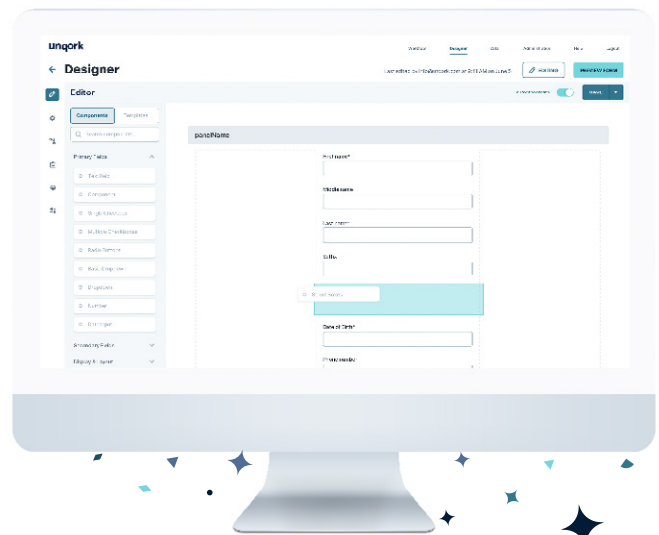

Also, by eliminating the need to write code from the building process, no-code expands the scope of who is doing the development. In a no-code platform, users (or **‘Creators’** as we refer to them at Unqork) build applications by drag-and-dropping configurable elements representing both user-facing features and back-end application logic. While modern programming languages (Java, Python, etc.) can take a year to learn and a decade to master, no-code can be picked up in **just a few weeks**, making development more collaborative and recruiting more flexible.

Unqork: the World’s First Enterprise No-Code Application Platform

Unqork is specifically designed to address the challenges of the world’s most complex and regulated service environments, including **financial services, insurance, healthcare, and government**. We levy decades of industry-specific experience from our in-house experts to take on each sector’s most critical challenges.

Unqork has backing from some of the world’s most disciplined investors, including Goldman Sachs, Capital G, and BlackRock. Our technologies have been adopted by leading organizations, including Liberty Mutual, Marsh, Pacific Life, Goldman Sachs, and the city of New York, just to name a notable few.

Our clients can achieve unparalleled speed and flexibility in their development function while requiring a fraction of the resources. We can deliver these benefits through:

A Unified SaaS Platform

Unqork boasts dozens of components and capabilities related to **compliance** (up-to-date rules engines for FATCA, UK CDOT, Dodd-Frank, and more), **security** (native encryption, RBAC, and crowd-sourced penetration tests), and **application management** (SDLC governance, historic versioning, and module management).

A Visual UI

Applications are built via an intuitive, visual User Interface (UI) featuring drag-and-drop components representing user-facing elements, backend processes, data transformations, third-party integrations, and a growing library of industry-specific templates.

Enterprise-Grade Standards

Unqork comes with enterprise-ready compliance (e.g., SOC2, GDPR, Privacy Shield compliant, etc.). We have complete security capabilities, including proprietary RBAC solutions, and we provide BCP and DR support for applications built on our platform.
