

SOLUTION BRIEF

COVID-19 Vaccination Platform

Rapidly deploy a COVID-19 Vaccination Platform with robust internal- and external-facing community, administrator, and clinical workflow capabilities.

When it comes to overcoming the COVID-19 pandemic, the hard work of developing a vaccine has been completed, and the unprecedented challenge of administering vaccinations to millions has begun. This rollout has been made all the more complicated due to demand outstripping supply, the logistics of how the vaccines must be administered and reported, and the need to comply with social distancing guidelines for the safety of patients and staff.

To organize and optimize this undertaking, healthcare organizations and government agencies need a robust digital solution to help them scale eligibility, documentation, notification, and scheduling processes for both new and existing patients. Building a complex digital vaccination solution capable of meeting these requirements would be difficult and resource-intensive under the best circumstances, but the urgency of the moment has made it even more challenging—this is also where Unqork's enterprise no-code platform can be a game-changer.

With Unqork, organizations can rapidly build and effectively manage a custom **COVID-19 Vaccination Platform** in days to weeks. Health systems, hospitals, and agencies can use Unqork to build individual workflows and/or integrate them into existing systems and third-party services. Unqork can be used to build highly automated patient-facing processes, including user identification, eligibility assessments, pre-screening questionnaires, appointment scheduling, and omnichannel notifications/reminders. The Vaccination Platform can also be used to support administrator-facing functionality such as reporting, analytics, and worklists, patient registration, clinical questionnaires, as well as vaccine supply and location management.

With Unqork, healthcare organizations can develop the tools to efficiently take on the crucial work of getting the nation through the crisis. As factors evolve (e.g., new guidelines, new vaccines, new supply variables, new eligibility requirements), the Platform can be easily updated and scaled to meet your vaccination initiative's needs.

Key Benefits

- ✓ **Accelerated time-to-market:** Configure and deploy your custom COVID-19 Vaccination Platform in a matter of days to weeks
- ✓ **Operational efficiencies:** Streamline and automate eligibility verifications, notifications, and reporting to scale and optimize key processes
- ✓ **Enhanced patient experience:** Provide patients with intuitive self-guided functionality, including eligibility checks, scheduling, and appointment notifications

Capabilities

Tailored Experiences

The Platform can provide personalized experiences for all stakeholders (patients, workers, administrators) with access to relevant workflows and information

Automated Eligibility Assessments

Provide a patient-facing eligibility questionnaire to automatically discern eligibility based on configurable guidelines

Clinical Reporting

Optimize clinical information-gathering via questionnaires and reporting to immunization repositories

Real-Time Notifications

Enable and automate real-time, omnichannel message notifications to patients

Vaccine Supply Management

Keep track of vaccine supplies and distribute information to relevant decision-makers

Location Management

Manage shifts and processes at multiple vaccination sites through one centralized dashboard

Insurance Intake

Automate processes to optimize insurance integrations

Scheduling

Optimize patient scheduling for vaccine dose distribution

Patient Registration

Automate patient intake processes to gather information for registrars

About Unqork

Unqork is the industry pioneer no-code enterprise application platform that helps large companies build, deploy, and manage complex applications without writing a single line of code. Organizations like Goldman Sachs, Liberty Mutual, the Cities of New York and Washington, DC and Maimonides Medical Center are using Unqork's drag-and-drop interface to build enterprise applications faster, with higher quality, and lower costs than conventional approaches.
